

Custom Remanufacturing Solutions Leads to Prime Savings

Overview

PSI Repair Services brings obsolete vacuum pumps back to like-new condition.

Challenge

A customer wanted to extend the life of 5 obsolete vacuum pumps, already operating for over 30 years, and needing major reconditioning to run for the next 30 years.

Solution

As expected, there was significant wear & tear in each unit. Some required complete overhaul and some were even missing components. PSI was able to offer a custom solution for each unit and manufacture parts where needed. Some parts were upgraded to make the units more robust and efficient, and to improve upon the original design.

Results

PSI Repair Services completed custom solutions for 5 vacuum pumps, remanufacturing each to like-new condition.

74% Cost savings

To retrofit the pumps, the cost would have exceeded \$500K - saving the customer at least \$370K by remanufacturing them instead.
